```python
class Extraire:

    import tabula

    def __init__(self,chemin,page="all",nbtab=None):

        self.chemin=tabula.read_pdf(chemin,pages="all")

        self.nbtab=len(self.chemin)

    def listetableau(self):

        i=0

        global liste

        liste=[]

        table=self.chemin

        while i < len(table):

            liste.append(table[i])

            i=i+1

        return liste

    def listetab(self):

        for li in range(len(liste)):

            print("Tableau N° " + str(li+1))

            print(liste[li])
```
